

## Project Reference

# The Wedding Palace, Poland Warmed up by DEVI<sup>™</sup>mat

## Project

### Heating solution

DEVI<sup>™</sup>mat DTIF-150 on 600 m<sup>2</sup>

### Thermostats

DEVI<sup>™</sup>reg

### Capacity

39 kW

The historic center of Warsaw called “The Old Town” was appreciated by UNESCO by putting it on the World Heritage List in 1980.

Among the historic buildings like palaces, churches and architectural complexes of which many actually were destroyed during the War but reconstructed with great care in the 2nd half of the 20th century you can find the Wedding Palace – the main venue to get married in Warsaw.

Warsaw’s Old Town and the Wedding Palace were rebuild after the Word War II using the preserved images and paintings made

by the Italian artist Bernardo Bellotto, called Canelletto, in the 17th century.

Despite the fame of the Wedding Palace few realize that since 2007 this building has been equipped by having DEVI<sup>™</sup>mat under 600 m<sup>2</sup> of wooden and stone floors.

Thanks to DEVI intelligent solutions all newlyweds and their guests can feel comfortable during the ceremony no matter how cold it is outside.

We believe that all marriages concluded in the Warsaw Wedding Palace are forever and wish all the newlyweds all the best!
